Separate Account Manager Advisors Capital Management to Launch a Global Balanced Portfolio.

February 14, 2008 (Paramus, NJ) -- Advisors Capital Management LLC (ACM) has launched a Global Balanced Strategy which will allocate investments across commodities, US bonds, foreign bonds, US equities, foreign developed market equities, emerging market equities and cash.

The ACM Global Balanced portfolio gives primary emphasis to capital appreciation without sacrificing income entirely. Selected ETFs (exchange traded funds) are used to provide sector and world regional allocations. Macro determinations provided by ACM's Chief Investment Officer and Co-Founder Dr. Charles Lieberman are used to select sector or region concentrations with allocation limits placed on holdings based on perceived risk and opportunity. Lieberman a former Federal Reserve economist has been overseeing ACM's separate account and mutual fund wrap accounts since 2001 will use these top down determinations to guide his global allocation changes.

This strategy provides a broadly diversified portfolio designed to mitigate the impact of any one sector, country, or investment style. The Global Balanced strategy is part ACM's Mutual Fund/ETF Wrap Program with a minimum account of \$50,000
